## **AGELLIS receives order of Level Measurement System from partner in the US**

Agellis Group AB, a company that develops and markets advanced technology for process control in the steel industry, has received an order valued to 800.000 SEK from it's American partner Metal Products and Engineering-U.S , LLC (MPE-US). The end customer is Chaparral Steel Company located in Midlothian, Texas USA.

"End-customer requirements of increased steel quality is the reason behind the order" says Robert T. McGuire, President of MPE-US, "The EMLI-T® system enables the customer to maintain a high and even quality level in their steel production".

"Requirements on increased quality from end customers means increased interest in process control in steel plants. We will most certainly see more examples where our products enable increased quality and higher yield at steel plants in the future" says Mårten Öbrink, who is taking over as CEO at Agellis group.
